

pypresso on a GPU — every CPU comparison measured, 2026-08-25/26

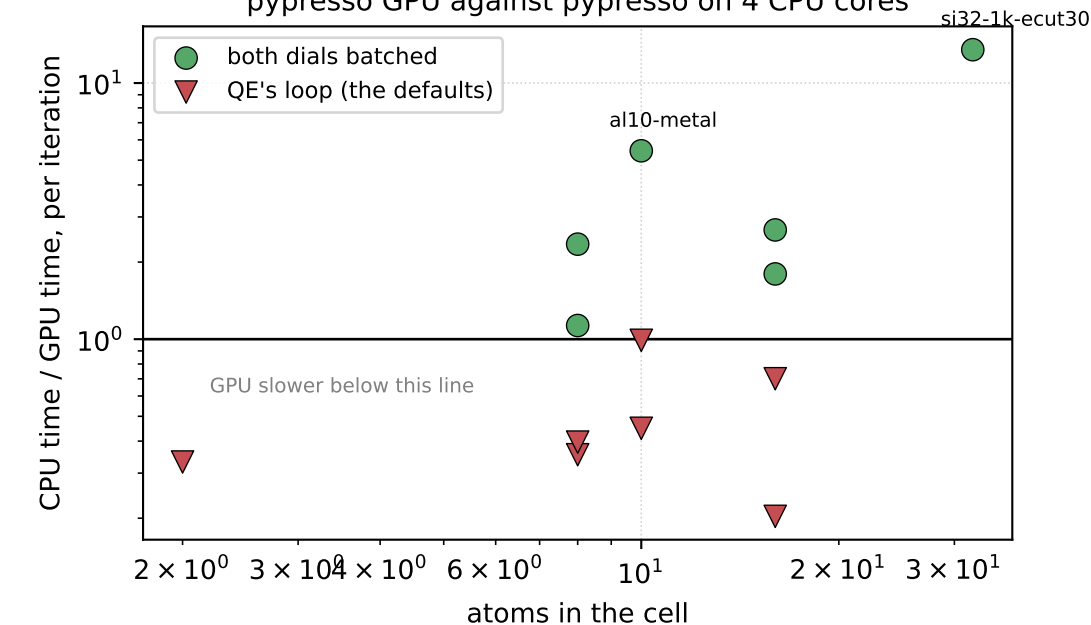

The batching dials invert on a GPU
al10-metal, 10 atoms, 10 k-points

Where the gain is, stage by stage
and how it grows with the cell (ecut 30, b=all)

Every matched pair: same code, same input
pypresso GPU against pypresso on 4 CPU cores

A different metric: against serial QE
one core is the softest baseline — see PERFORMANCE.md
